# Provident Fund Platform

The Provident Fund's website serves as a portal for members to access various services related to their retirement funds, including checking their account balances, updating personal details, and managing their investments. The website also provides information about the PF's policies, investment schemes, and retirement planning resources.

## About client :

The client is a government organization located in a large Asian country. The clients are dedicated to assisting members with retirement planning by providing expert guidance and continuous support to help them build a secure portfolio for their retirement years.

# BUSINESS REQUIREMENTS :

- The client wants to migrate the existing portal to the Liferay portal, along with a brand new look, and wants to add some features.
- The portal should support multiple languages.
- The portal should have four distinct sections: member, employer, and corporate.
- Banners, FAQs, shortcut links, consumer queries, articles, and news sections need to be redesigned.
- The portal should have separate pages for articles and news.
- The portal should have search functionality for different sections, like articles and pages.
- Social media sharing options should be available for each article in the portal.
- Chatbot integration needs to be done.
- Consumer query services need to be implemented.
- Faqs should be on all required pages.
- All three sections should have different logins: member, employer, and corporate.
- Search suggestions should be there while searching for any article.
- Website should be

## Quick Facts :

" Industry: Government "

## Benefits Delivered :

" 
- Project and team management to deliver quality over time.
- On-time delivery and applying the latest changes frequently.
- UI translation to Liferay fragments, templates, and modules with optimal and effective approaches by which their requirements meet the best industry solution.
- High availability for requirements, updates, and bug-fixing sessions.
"

# KEY FEATURES :

- Multiple language support is implemented to make it easier for people who speak different languages.

- Member, corporate, and employer sections are implemented with separate logins.

- Banners, FAQs, shortcut links, consumer queries, articles, and news sections are redesigned as reusable components.

- Separate pages were added for articles and news to make it easier for users to find and read the content.

- Social media sharing features were implemented for each article to provide easy sharing on social media platforms like Facebook, Twitter, Instagram, and LinkedIn.

- The chatbot feature was integrated to provide a virtual assistant for user support.

- Consumer query services were implemented.

- FAQs are implemented for all required pages to guide users.

- User-friendly search functionality for articles and pages is implemented on all pages.

- Search suggestions were implemented.

> " The IGNEK team understood what we needed right away and made everything work just as we wanted. It was a really good experience working with them. "

# 💡 SOLUTION/TECHNOLOGY USES:

## Liferay DXP 7.4

- Fragments were used to support banners, social media links, FAQs, tables of contents, and shortcut links.
- Liferay theme is used for branding the portal.
- Leveraged Liferay's language capabilities.
- Structure, Web content, and templates are used to support the implementation of blogs, cards for carousel functionality, quick links, FAQs, and banners.
- Leveraged widget template implementation of the navigation menu.
- Widget templates were used to support breadcrumbs, search bars, language selectors, category management, and related articles.
- Leveraged Liferay's search widgets to achieve desired search functionalities.
- 100+ images and 50+ PDFs used in the portal are managed with documents and media.
## JavaScript/JQuery

Js library for multiple logins, bottom-to-top functionality, and sliding banners with different text and buttons.
## Chatbot

Chatbot integration for consumer support

## Elastic Search

Elastic search is used to improve search performance
